8 Fallacies of Distributed Computing

1. The network is reliable
2. Latency is zero
3. Bandwidth is infinite
4. The network is secure
5. Topology doesn't change
6. There is one administrator
7. Transport cost is zero
8. The network is homogeneous

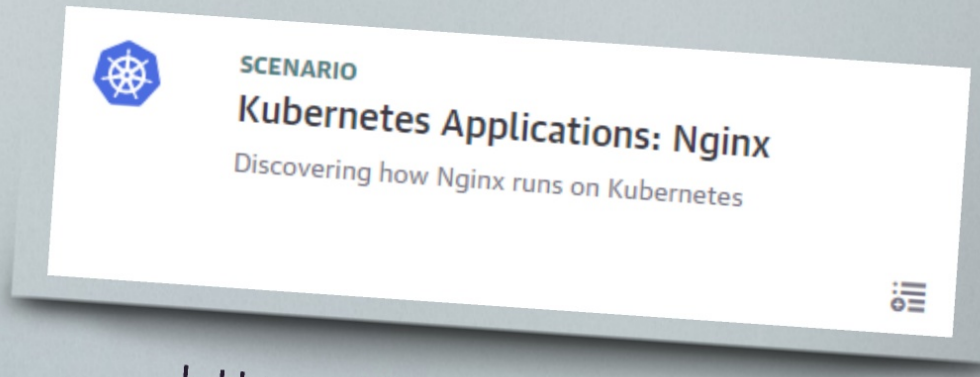
A common Hello World
for Kubernetes



https://bit.ly/**36lqfF9**

Goals

- kubectl CLI tool
- Install Nginx on Kubernetes
- See Deployments in Pods
- See Service provide access to replication of Pods

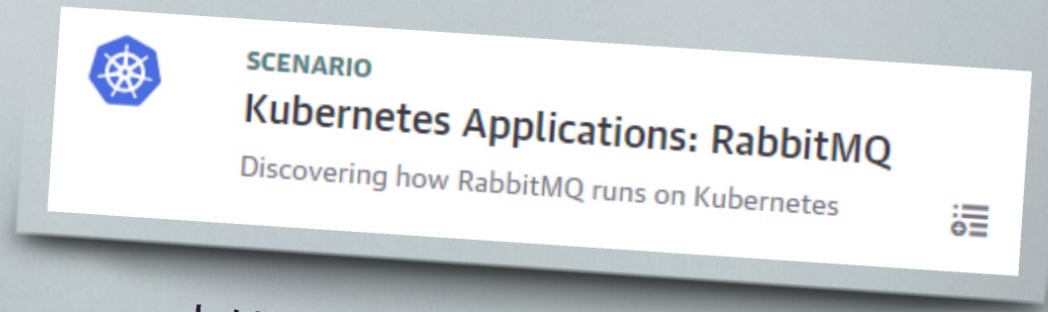
First App

https://bit.ly/33Cd4Uw

Goals

- Command line tool
- Dashboard
- Run app
- Scale app
- Load balance
- Test resilience
- Roll out new version of app

AMQP messaging benefiting
from Kubernetes

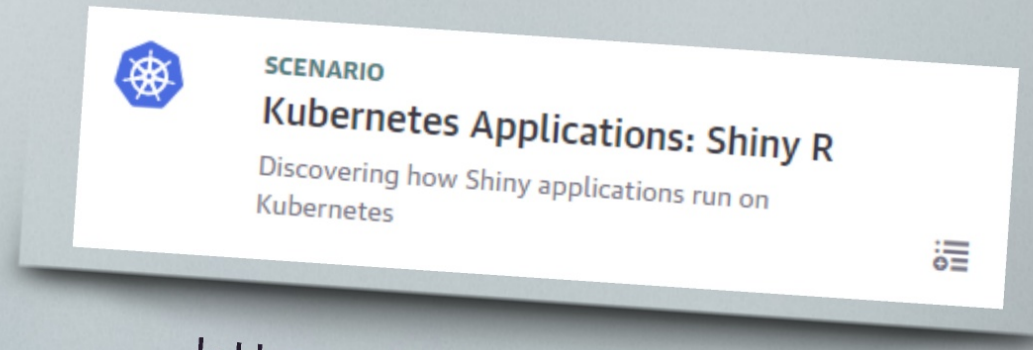


https://bit.ly/**3dcRg4Y**

Goals

- More Kubectl
- Helm charts
- Install RabbitMQ on Kubernetes
- StatefulSet application
- Play with a little chaos

R Language



https://bit.ly/3jEK5EP

Goals

- Basics of kubectl CLI tool
- Install Shiny R applications on Kubernetes
- Containers are deployed as Deployments in Pods
- Service can provide access to a Pod
